

MODEL 350

7,5t-10t

High capacity load cell for portable vehicle weighbridges

- We enlarge the capacity range of our shear beam load cell Model 350 for covering highest capacities of 7,5t y 10t.
- A solution for making portable weighbridges in efficient way by fixing shear beam load cells directly under the platform, as it is a very common in pallet scales.
- Typical examples are weighbridges of 6m to 9m length and 2,5m width, for Max= 15t/d=5kg to Max=30t/10kg.
- This type of portable scales has increasing demand in agriculture weighbridges for vehicles and small trucks.
- The fully stainless steel construction and hermetically sealing by welding give a protection mode IP68 and IP69K, needed for applications with risc of temporary flooding and allows high pressure cleaning.
